

Prashant Prabodh

Senior Technology Executive
Software Architect . Coder . Consultant

job.prabodh@gmail.com

+91 88 88 898 004, Pune, India

<https://a1prashant.github.io/portfolio>
<https://linkedin.com/in/prashantprabodh/>

Visionary technology executive spearheading top-line growth, instilling a culture of innovation, and driving cost reduction and operational optimization. Proficient in conceptualizing and executing large-scale project visions from inception to completion, overseeing numerous projects and programs throughout their lifecycle.

Industries

- . **Banking** & Finance
- . Trading Technologies
- . Market Data & Connectivity
- . **Automotive**
- . Backup & Recovery
- . Semiconductor & CE
- . Healthcare

Profile Summary

- 25 Years of rich experience in software development, architecture & technical leadership
- Led technical teams of up to 120 engineers across multiple domains
- Innovative problem solver with strong communication and soft skills
- Strategic thinker and stakeholder management skills
- Award-winning innovator with process-driven and craftsmanship mindset
- Technical Enthusiast and Lifelong Learner

Technical Domains

- . **Full Stack** development
- . Systems Programming
- . **Distributed** Systems
- . ADAS, SDV
- . **GenAI**
- . Embedded Systems & IOT
- . High Frequency Trading
- . Low Latency Programming
- . Website development
- . Mobile App development
- . Reactive Programming
- . Functional Programming
- . OO Programming
- . Multithreading
- . Meta Programming
- . **Cloud** Computing

Professional Experience

Principal Architect | Persistent | June 2023 - till date

Project-5: Multiple GenAI Projects for UK based financial organization [Domain: Finance, GenAI]

- The organization has many products and projects running in which they need to strategically enable needs to automate their KTLO activities (Keep The Lights On), Design & Implement multi-agent system CONA, Enterprise Guardrail Engine, KB (neo4j based) system, SDLC Automation Platform, BMAD Methods.

Project-4: Physician Portal 2 (PP2) [Domain: Healthcare, GenAI]

- Architecting the migration of the PP1 (UI+Salesforce) to strategic standalone PP2 (React+PostgreSQL). Institute and Partner Institute Management, Patient Cases Management, Reviews Management, Workflow Management on AWS infrastructure.
- AI assisted Case Reviews writing for Physicians.

Project-3: Internal GenAI ChatGPT Platform [Domain: GenAI, RAG]

- Led a full-stack architecture & development of an Internal ChatGPT GenAI assistant.
- Use of RAG, Prompt Engineering, Guardrails (pre-in-post processing), Context Window Management, Agentic Workflows, Vector DB, Embeddings, Token Optimization and Cost Control, Text Extraction (Documents, Images)
- Technologies: Next JS, FastAPI, Swagger, OpenAI API (Models: Embeddings, Dall-E, GPT4o), Langchain, FAISS, Azure AI Studio, Azure AD, deployment on AWS (Route 53, Application Load Balancer, Certificate Management, ECS Fargate, Secrets Manager, S3, RDS Postgres, CloudWatch, IAM, Autoscaling), Docker, Terraform, GitHub Actions

Project-2: GenAI Hub integration [Domain: Data, GenAI, LLM, Evaluation Framework]

- Persistent product GenAI-Hub (LLM Apps and Keys Management solution) is integrated at one of their customers' end. That includes adding customizations, integrating with AD, many Google cloud services and the evaluation framework.

Project-1: Architecture [Domain: Automotive, ADAS, SDV]

- Migration of monolithic-ADAS to SOA-based ADAS architecture for Software Defined Vehicle.
- Designing the in-vehicle custom SOA framework, Gateway layer, Applications, Middleware, Platform, Abstraction layers & streamlining ops for multiple applications.
- Improved standardization, configurability, manageability, Security and Telemetry.
- Utilizing Sparx's Enterprise Architect tool for UML diagrams and Interface Definition Languages (IDL) and Modern C++14 for precise interface and data model definitions.

CTO (Consultant) | IoT, Web | IXO Labs, RI Equation | January 2023 - June 2023

- Provided consultation for in-house and external Web and IoT projects.
- Played a vital role as a member of technical management teams.

Top Skills

- . **Project** Management
- . **People** Management
- . **Agile** Coach
- . TDD, BDD Process
- . SOA, Microservices
- . **OOAD**
- . Best practices
- . DevOps, CI-CD
- . Automation

Skill Specifics - Modern C++ 11/14/17, C Java, Python, FastAPI, Flask Qt/QML, Flutter - HTML, CSS, JScript SpringBoot, Quarkus GIT, Docker, Jenkins - Maven, Gradle, Groovy - SQL, NOSQL - OpenAI API, Azure AI, AWS - Google Cloud, Vertex AI - Terraform, GitHub Actions - Gemini LLM Code Assist - Dapr.io, K8S, Ansible UML, Draw.io, Plantuml - IDL, ROS, Some/IP - CodeBeamer, JIRA - Crucible, Confluence Enterprise Architect Unix Shell Scripting Powershell, Perl - CMake, Bazel - REST API, Open API (Swagger) - Harbor Registry, Postman - SonarQube, Sonar Lint - MFC, Cocoa on Mac - BigFix, Relevance, RTC, RSA - DDK Windows - Eclipse Plugin Development	- Contributed to project architecture, design, prototyping, and execution with a focus on technical aspects. Mainly used: Generative AI tools, Qt/Qml, C++, Java Quarkus. Sr. VP (CTO) Banking iDigiCloud Technologies Sep 21 – Oct 22 - Established tech capabilities for a startup, covering tools, processes, project management, and architecture with a focus on SOA, Microservices, Reactive, EDA, and Omnichannel for a Core Banking System platform. Managed end-to-end dev, sys, sec, and ops functions, including hardware infrastructure, on-prem cloud setup, information, security architecture & configs. Technical Program Manager (Consultant) Automotive FEV India Sept 21 – Oct 22 - Program Management functions for one of the Customer accounts - Initiate, run, architect POCs in ADAS, SDV (Software Defined Vehicle). Lane Keep Assist (LKA) Solution Architect ADAS KPIT Technologies GmbH, Germany July 19 – Mar 21 Project#1: In the domain of Advanced Driver Assistance System (ADAS), for Central Sensor Cleaning Manager on xPAD hardware. Receive, Analyze, Prioritize, Process Blockage info and initiate cleaning of sensors like LiDAR, Camera via Actuators - Use of the LeSS (https://less.works) Project Management Methodologies - Franca IDL (Interface Definition Language), ROS (Robotic Operating System), Some/IP (Scalable service-Oriented MiddlewarE over IP), Git, Classic AUTOSAR (Signal based), Adaptive (Service Based), ARA (Autosar Runtime for Adaptive Applications) COM. - Analyze requirements, Design, develop and unit test the Adaptive (Service Based) applications as per AUTOSAR and industry standard practices, guidelines. Project#2: Setting up AWS cloud based CI pipeline, Cloud Automation, Groovy Shared Library Senior Technical Architect BFS Cognizant, India Oct 2013 –May 2019 - One of the first key technical member, who initiated and setup the account - Built teams by contributing to recruitment, KT and overall management processes - Accountable for overall quality of the code and delivery via automatic unit test frameworks and extensive reviews, enforce coding guidelines and best practices - Analyzed 20+ Stock Exchange specification - used for estimation and building design - Built generic modules (Template Meta Programming) which were extensively used across multiple venue development, Messaging Formats: FIX,ITCH, TIP, FAST, many proprietary ones.
Certifications - Databricks GenAI C'cate - Certified Scrum Master 2015, Scrum Alliance PL1 Certification, 2016, Cognizant ITIL Foundation, 2012 - Certificate in Embedded Systems, 2003, IIT Bombay	Sr. S/W Engineer Virtualization & Endpoint Mgmt IBM (ISL) Mar 10 –Oct 13 - Engaged in development and maintenance of products (1) TEM for OS Deployment (2) IEM for Server Automation (3) Tivoli Provisioning Manager – Automation Package Development (4) POC for Service Lifecycle Management Lead Engineer Backup & Recovery Symphony Services Feb 08 –Mar 10 - Responsible for designing, developing, and validating the feature additions. Technical Specialist Streaming Protocol Aztechsoft Oct 07 – Jan 08 - Part of RTP, RTSP protocol development on Helix server team Tech Lead Semi-CE Wipro Technologies May 2004 –Sept 2007 Project-1: Uploader Abstraction Layer – C++ and JNI based abstraction layer between Java User application and a DLL used for uploading / upgrading / cloning the firmware on USB/FireWire SATA bridge device Responsibilities: Team Management, Design, Development Project-2: Device Drivers for OXUSB95x devices – USB-to-Serial bridge devices Responsibilities: For IXUS 950 (1-1 port) and OXUSB954 (1-4 ports) - implementation of Bus driver and Function driver. Bus driver used only for OXUSB954. Function drivers do main tasks of read/write/handling IOCTLs/PNP IRPs. To show serial ports we added Window Registry entries. Drivers were tested using WHQL and COM applications like HyperTerminal/RealTerm/COM7.6. Software Engineer CygNET Systems Mar 2001 –Apr 2004 - Worked on (1) WeighPad (2) MailPad (3) RDP development - Engaging in customer interactions, requirement gathering, and coding to deliver solutions.
Education PGDBM, (IT & Systems) 2010, ICFAI Bachelor of Engineering (Computer Science), 2000, Pune	
Interests - Meditation - Social Work - Singing, Sketching
